

LeakLens AI

Find where your e-commerce money is leaking — and fix it.

An AI decision and financial intelligence layer for COD e-commerce.

DATA → INTELLIGENCE → ACTION → SAVINGS

Sales are visible. Profit leakage is not.

COD businesses can see orders and revenue without clearly seeing where preventable profit is disappearing.

GROSS ORDERS

The hidden gap

Revenue is easy to see.
Preventable leakage is
fragmented.

RTO

Repeat refusals, risky addresses, category-level returns.

Settlements

Delays, deductions and mismatches.

Couriers

Performance varies by city, product and customer.

Orders

Duplicates, cancellations and low-margin orders.

Costs

Packaging, discounts and operational overhead.

KEY MESSAGE • Sellers can see sales. They often cannot clearly see where profit is leaking.

Who feels the pain?

Built for COD-heavy businesses where manual investigation becomes expensive.

ANCHOR PROFILE

2,000

orders / month

Across multiple couriers, manual loss and payment-mismatch detection becomes difficult.

MULTI-COURIER GROWTH SELLER

Social sellers

Instagram / Facebook sellers

Shopify stores

Commerce operations at scale

WooCommerce

Connected order flows

D2C brands

Direct customer economics

SMBs

Lean operating teams

Multi-courier

Many handoffs, one margin

This market already exists.

Existing products validate demand. Our opportunity is differentiation — not rebuilding the same category.

✓ Order management

✓ Courier integrations

✓ COD reconciliation

✓ RTO prediction / risk

✓ Customer risk

✓ WhatsApp confirmation

✓ Tracking & analytics

✓ Courier recommendations

OPEN SPACE

Financial decision support — turning operational signals into measurable actions and savings.

We are not rebuilding the category.

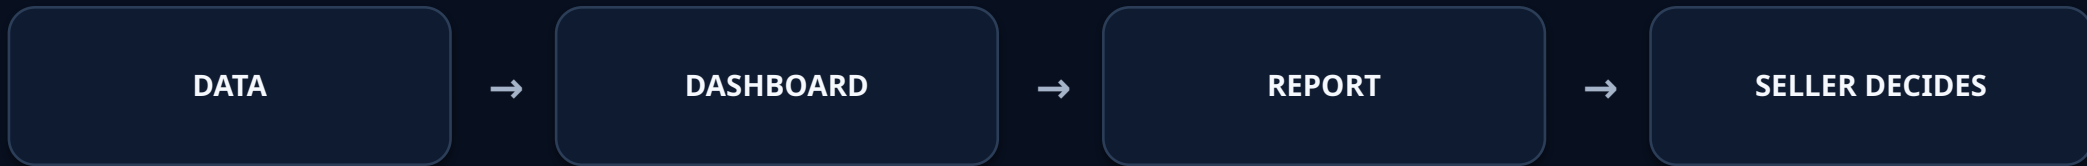

We add a financial intelligence layer on top of capabilities the market already covers.

CAPABILITY	MARKET ALREADY COVERS	OUR FINANCIAL INTELLIGENCE LAYER
Order management	Orders and workflows	Investigation + financial impact
COD reconciliation	Settlement matching	Mismatch explanation + claim evidence
RTO prediction	Risk score	Why + recommended action + avoided loss
Courier intelligence	Integrations / recommendations	Overcharge investigation + outcome tracking
Profit analytics	Reports and visibility	Leakage detection + measurable saving
AI analytics	Pattern discovery	Problem-to-action business decisions

The real gap is not data. It is action.

A decision layer on top of e-commerce operations — not another dashboard.

CURRENT SYSTEM

OUR APPROACH

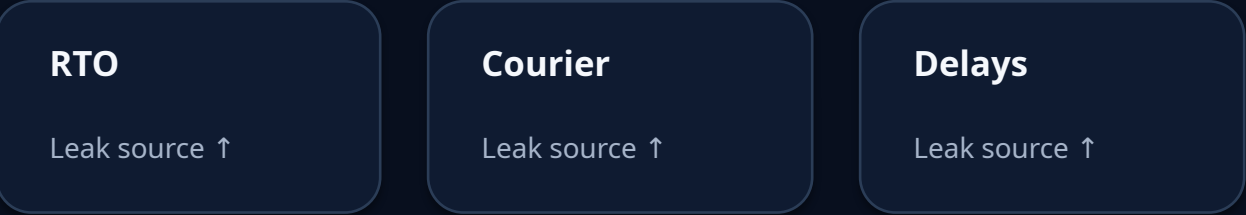

DECISION • DATA → INSIGHT → ACTION → RESULT

Know where your money is leaking.

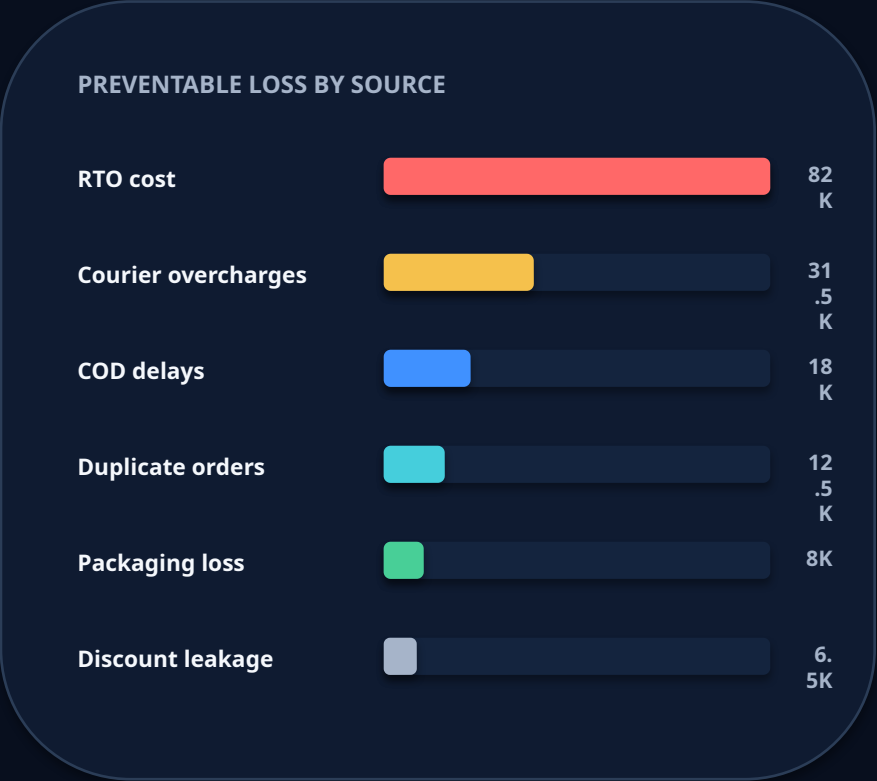

Instead of only showing profit, the system explains preventable profit loss.

WHY?

Illustrative dashboard snapshot — values are examples for the pitch.

We don't just manage orders.

We help e-commerce businesses understand where their money is going — and what to do about it.

Find the leak. Fix the problem. Grow the profit.

Pakistan first • COD-heavy markets next
